Voluntary Tree Wardens Report

PA22/00903 – Katandra Castle Hill Forder Saltash Cornwall PL12 4QW

This is a retrospective application for work started about 4 months ago, to remove trees endangering a power line. We note that the application includes planting 9 trees as replacements for those felled. These have not yet been planted, but this should be done without delay as the optimal season for planting ends in March.

We note that the company doing the work, HiLine, could improve their communication both with the property owner and with Planning - because seeing an application only in retrospect does not allow us to comment on the prior state of the trees which have already been felled!
