

**To receive an update on the Town Council CCTV S106 application and consider any actions and associated expenditure**

**Summary**

Cornwall Fire and Rescue are undertaking an efficiency review of fire control. Whilst the original review and potential partnership approach did not include the CCTV function, the subsequent full business case has been required to review all activities within the control room including the delivery of the CCTV provision at Tolvaddon.

Unfortunately, the options that have been put forward within the business case recommend that going forward the critical control room focuses on the delivery of its statutory duty to call handle, mobilise and support fire and rescue functions.

As far as we are aware, the future of Tolvaddon remains in question.

**S106 Application / Panel**

Further to this, there have been several delays in the Town Council S106 application being considered due to the panel not being quorate on several occasions – attached S106 application for information.

The results of the consultation show support from the high street.

**Options**

1. Put the Town Council S106 CCTV application on hold until we understand the position of Tolvaddon;
2. Investigate alternative solutions to host the CCTV system, update the S106 application, and resubmit to the Panel;
3. Investigate CCTV options for Town Council premises only utilising the Town Council budget code – defer to a future Services Committee meeting for consideration.

**End of Report  
Town Clerk**
